## Question 1

### Part a

Use the character table given in lectures for  $\mathbb{Z}_5$ , extended to a Dirichlet character, to evaluate

$$\sum_{i=1}^4 \chi_i(n) \overline{\chi_i(b)}, \quad \text{for each } b \in \mathbb{U}_5.$$

### Part b

Use the results of (a) to prove, in detail, that there are infinitely many primes congruent to  $1 \pmod{5}$ ,  $2 \pmod{5}$ , and  $3 \pmod{5}$  and  $4 \pmod{5}$ .

## Solution

### Part a

### Part b
